

ZLOGGMANAGER

TEMPERATURE DATA LOGGERS

Free Windows/Mac desktop application

We offer (mostly) all that the other guys have and what you can think about. Yes, it is free. On top of this:

Trim the start/stop time on your reports

Opened a refrigerated shipment, checked the temperature logger in your ambient warehouse, and inadvertently created a deviation? Easily adjust the start and stop time, and it automatically recalculates the entire shipment, providing a new PDF report in just 3 clicks. No more unintentional deviations.

Overlay as many loggers as you want

Compare 2 or several shipments, just dragging and dropping your files.

Automatic calculation of hot and cold spots for your mappings

Are you still using Excel to calculate your hot/cold spot with all your files? Our software calculates it for you...live.

21 CFR Part 11 module

Technically, configuration software does not store or archive data. But if this is important for you, this module could be activated for free. User management, audit trails.

Protocol of validation (IQOQ)

Should you want to perform an IQ and OQ (Qualification of Installation and Operational), we can provide you with our own protocol.

Supports 12 languages

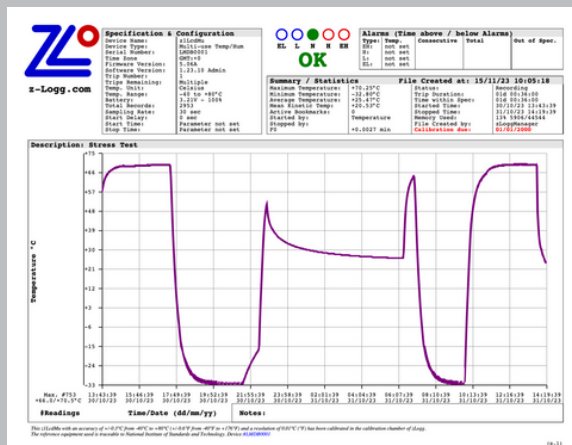

Yes, English is the international language. But it is not everyone comfortable to use it. And you do not want to take the risk of an error caused by misunderstanding. Plus, it is a question of respect. Languages are beautiful!

Access to your online calibration certificate anytime

We store it for you electronically, and you can download, save, and print it anytime from our software. And yes, we give you access to the certificate of our internal standard used to calibrate your logger.

Interactive smart graph with automatic calculation

Zoom in. Zoom out. Trim the data. It automatically recalculates everything for you. Allowing you to go back to its initial recording that is never erased.

Designed, manufactured and calibrated in the US
